Five Elemental Clash

GAME DESIGN DOCUMENT

题目	Five Elemental Clash
作者	Susan Zhang
PLAYER FORMAT	2-4 Players (PvPvPvP)
ESTIMATED PLAY TIME	60-90 minutes

Setting

A mythical world based on the ancient Chinese concept of the Five Elements (Metal, Wood, Water, Fire, Earth). Players take on the role of elemental avatars exploring a dangerous and magical landscape, battling bosses, gathering resources, and competing for supremacy.

Goal

Players must defeat the opposing avatar/avatars in combat. When either the willpower or the HP goes down to zero, the player avatar dies.

Play Value

Tactical decision-making through resource management, elemental interactions, and boss battles. Strategic exploration and combat are key to success.

Hook

The dynamic interplay between the Five Elements (Metal, Wood, Water, Fire, Earth) and the use of randomly generated maps makes each game different. Bosses present unique challenges, requiring players to decide whether to engage in combat or avoid risk. The use of action points and dice-based mechanics for skills, attacks, and escape add tension to every round.

Target Player

The target players for "The Elemental Clash" will be board game enthusiasts who enjoy:

- Strategic depth and tactical combat.
- Players who appreciate fantasy themes, particularly those based on mythology and elemental forces.
- Gamers enjoy dice-based mechanics combined with role-playing elements, where randomness influences success but careful planning determines outcomes.
- Players who like the challenge of boss battles and the decision-making tension of whether to engage in high-risk, high-reward scenarios.

Game Pillars

1. **Elemental Synergy:** Five Elements (Metal, Wood, Water, Fire, Earth) define interactions with the environment and combat strategies. Players must make careful decisions to use these elemental advantages.
2. **Randomized Gameplay**: The board setup and encounters (bosses, events, and resources) are determined by dice rolls, ensuring no two games are alike.
3. **Risk and Reward:** Players face choices, such as engaging powerful bosses or using limited Action Points (AP) to move through hazardous terrain. Players must weigh the risks against the potential rewards.

Revision History

First Iteration:

- Initial development of key systems like movement, combat, AP, and the Five Element system.
- Developed Boss Cards with unique challenges, forcing players to make tough decisions about when to engage.
- Created Fate Dice system (Lucky/Unlucky cards) and map setup via dice rolls.

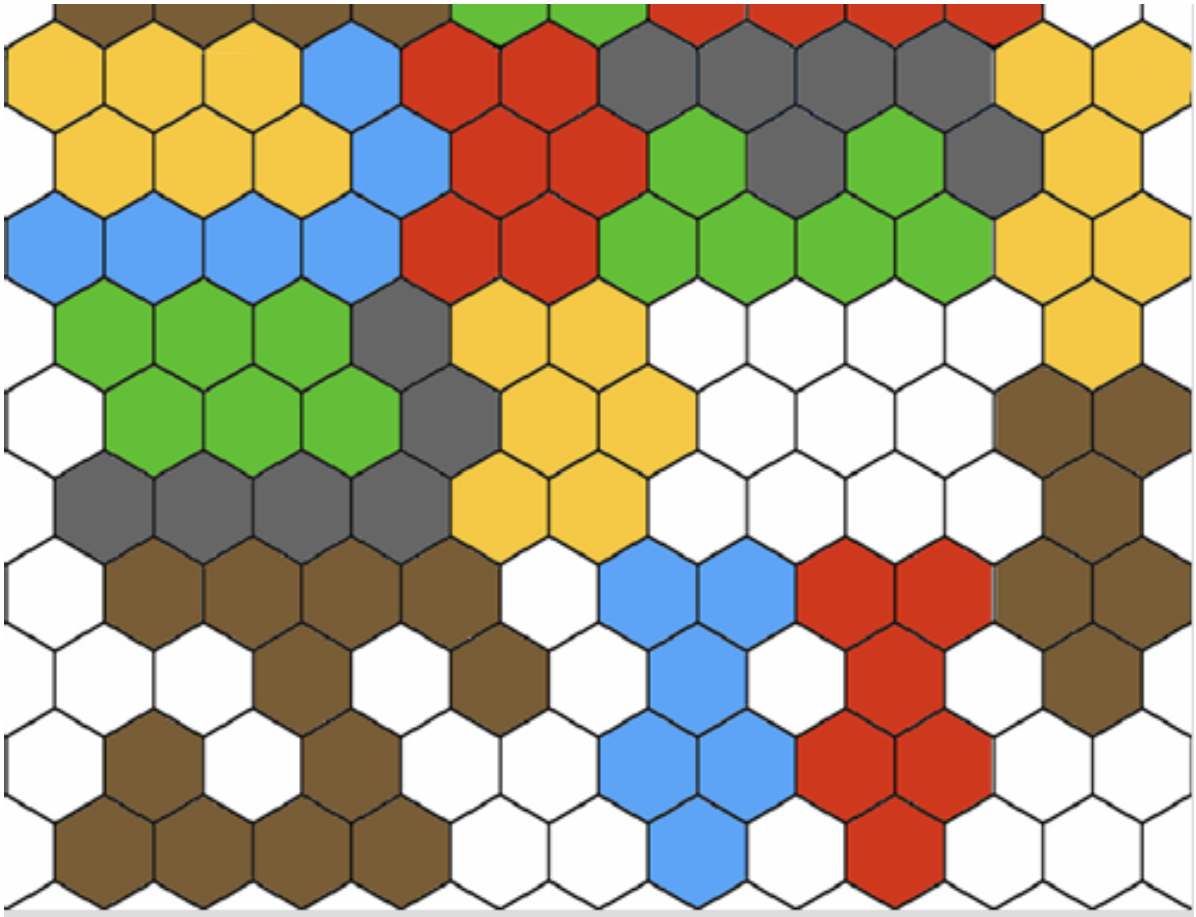
Components

Game Board:

A modular hexagonal board. The normal white grids under the colored grids are the original game board.

Terrain Cards

Different colored terrains are cut into different shapes (Same Value) each representing different elemental terrains. Players use dice to randomly generate the terrain layout at the start of the game. The colored grid is the terrain cards.



Character Cards

Tracks the player's attributes (Strength, Agility, Constitution, Willpower, Appearance, Luck) and elemental attributes (Metal, Wood, Water, Fire, Earth). (Blank Character card example see Procedure)

Boss Cards

Unique stats and abilities for each boss, including damage dealt, dodge requirements, and attack/escape difficulty.（Example Card see below)

Shadow Sorcerer

Attribute	Details
Skill 1	Mind Control
Effect	When the Shadow Sorcerer's HP drops below 50%, it attempts mind control. Players must pass a Willpower check. Failure results in forced actions, attacking teammates in the next turn.
Description	The Shadow Sorcerer manipulates the minds of enemies, turning them into its puppets.
Temptation	Defeating the Shadow Sorcerer rewards a Thunder Ore, increasing ranged attack damage by +5. Players must decide if they have enough Willpower to resist mind control or track its movements.

Dice

Various dice types (D6, D10, D20, D100) are used for movement, skill checks, combat rolls, and random map generation

Action Point (AP) Trackers

Players track how many actions they can perform each round based on Willpower.

Attribute	Value	Notes
Strength		
Agility		
Constitution		
Willpower		
Appearance		
Luck		

Fate Deck

Players draw from the Lucky/Unlucky Card Deck depending on their Fate Dice rolls at the start of each round. (Example Fate Card See below)

Tokens/Markers

Twist of Fate
Effect: The player skips their current turn and draws **1 Unlucky card** and **1 Lucky card**, both effects apply.

Endless Possibilities
Effect: The player draws **1 additional Lucky card** from the pile and uses it for free.

Wheel of Destiny
Effect: The player rerolls their Fate dice, changing the outcome for this turn (can switch between Lucky and Unlucky cards).

Used to indicate terrain hazards, resources, and boss locations.

Item Cards

Items such as potions, weapons, and equipment, with effects on player attributes. (Example Iterm Card see below)

Good Item Cards		Bad Item Cards
Attack Enhancement Gem		Cursed Potion
AP Cost: 2 AP		AP Cost: 1 AP
Effect: Increases attack power by 3 points for the next 2 turns.		Effect: Increases Strength by 2 points but reduces HP by 4 points next turn.

Game Setup

Board Creation

The map consists of hexagonal tiles representing different terrain types. Players take turns rolling a D20 to determine which tiles to place.

D20 Result	Terrain Type	Description
1-4	Plain	Plains are basic terrain, ideal for fast movement with no additional obstacles or benefits. Each move costs 1 AP.
5-8	Forest (Wood Element)	Forest terrain has thick trees, allowing players with high Wood attributes to move freely, while those with lower Wood may face obstacles.
9-12	Mountain (Earth Element)	The mountain terrain is rugged. Players with high Earth attributes can climb easily, while those with lower attributes need to spend extra AP or may fail.
13-15	Lava Zone (Fire Element)	Lava zones are dangerous. Players with high Fire attributes can move freely, but those with lower Fire attributes will move slowly and take fire damage.
16-18	Water Body (Water Element)	Water bodies include rivers or lakes. Players with high Water attributes can move quickly, while those with lower Water may be blocked or penalized.

19-20	Metallic Mines (Metal Element)	Metallic mines are rich in rare minerals. Players with high Metal attributes can mine resources easily, while those with lower Metal attributes may face cave-ins or other risks.

1. Strategic Locations: Some tiles are assigned with special properties (e.g., rare resources, boss spawn points). These will be rolled separately (D20 again) after the initial terrain placement.
2. Start Locations: Each player chooses a starting hex at the map's edge after the map has been generated.

Character Creation

There are two ways to do Character creation, and the players can choose which one they go with.

1. Fate Mode

Roll 1D100/1d20X5 to determine five basic attributes.(Strength, Agility, Constitution, Appearance, Willpower) and five elemental attributes (Metal, Wood, Water, Fire, Earth), with the final result multiplied by 5 to get the percentage values. There is no upper limit on individual attribute values.

2. Point-Buy Mode

Allocate 250 points to the five basic attributes and a total of 180 points across the five elements, with a maximum of 80 points in any single attribute or element. (80%)

(Blank Character Card Example)

Field	Information
Character Name	
Gender	

Age

Attribute	Value	Notes
Strength		
Agility		
Constitution		
Willpower		
Appearance		
Luck		

Stat	Base Value	Current Value	Calculation
AP			AP = Willpower ÷ 10
HP			HP = Constitution
Defense (Strength)			Defense Value = Strength/2
Dodge (Agility)			Dodge Value = Agility/2

Element	Value	Value Change each turn.
Metal		

Wood		
Water		
Fire		
Earth		

Five Basic Attributes

1. **Strength:**
    - **Function:** Affects the success rate and damage of melee attacks.
    - **Mechanics:** Strength determines the player's chance to hit and the amount of damage dealt in melee combat. The higher the Strength, the easier it is to hit, and the more damage is inflicted.
    - **Calculation:** When attacking, the player rolls 2D10; if the result is less than or equal to their Strength, the attack succeeds.
2. **Agility:**
    - **Function:** Affects dodge success rate, the success of ranged attacks, and certain special movements (such as climbing or jumping).
    - **Mechanics:** Players with high Agility can dodge attacks more easily and have improved accuracy in ranged combat. Agility also impacts movement in certain terrains.
    - **Calculation:** When dodging or performing a ranged attack, the player rolls 2D10 or 1d20; if the result is less than or equal to their Agility, the action succeeds.
3. **Constitution:**
    - **Function:** Affects the player's HP (Health Points) and ability to withstand damage.
    - **Mechanics:** Players with high constitutions have higher HP and can take more damage. Constitution also affects how much damage can be absorbed when defending.

    - **Calculation:** Every 10 points of the Constitution equals 10 HP.
4. **Willpower:**
    - **Function:** Determines the number of AP (Action Points) a player gets per round, as well as resistance to mental attacks.
    - **Mechanics:** Players with high Willpower have more AP per turn, allowing them to take more actions. Willpower also affects the player's resistance to mental attacks (e.g., charm or fear).
    - **Calculation:** Every 10 points of Willpower equals 1 AP.
5. **Appearance:**
    - **Function:** In certain situations, Appearance is used in non-combat scenarios, influencing social interactions, negotiations, or special abilities (e.g., charm, intimidation).
    - **Mechanics:** Players with high Appearance can gain advantages through charm, seduction, or intimidation, which may affect quests or enemy attitudes.
    - **Calculation:** When using charm or negotiating, roll 2D10; if the result is less than or equal to the Appearance value, the effect is successful.

Luck

- **Function:** Luck influences the player's fate during the game, determining whether they trigger lucky or unlucky events at the start of each round. During character creation, players roll 3d16 to determine their Luck value.
- **Mechanics:** Players with high Luck are more likely to trigger positive events and avoid negative events. Luck can also impact success rates in certain special scenarios.

Starting Items

Players randomly draw 3 item cards from the good item deck as their starting equipment.

AP and Initial Status

At the start of each round, players calculate their AP (Action Points) based on their Willpower: **Every 10 points of Willpower provides 1 AP (e.g., a player with 50 Willpower gets 5 AP per round).**

HP (Health Points) is determined by the Constitution: **Every 10 points of the Constitution equals 10 HP.**

Progression Procedures

Turn Sequence

Player Actions: Players may spend AP to perform various actions such as:

- Move: Cost depends on the terrain type (e.g., 1 AP for plains, 3 AP for mountain terrain if Earth attribute is low).
- Attack/Defend: Engage in combat with bosses or other players.
- Skill/Item Use: Players can use abilities or items (with AP cost).

Rolling for Actions

- Combat, movement through difficult terrain, and boss encounters all require dice rolls.
- D10/D20 for combat:
    - Attack Roll: Strength vs. boss/player defense.
    - Dodge Roll: Agility vs. attack strength.
    - Escape Roll: Player Agility vs Boss/Other Player Agility check to flee combat.

Challenges and Hazards

Terrain Difficulty: Some terrains present special challenges based on a player's elemental attributes (Example see below):

- Earth (Mountains): If Earth attributes <30, the player must pass a Strength or Agility check to climb. Failure results in an AP penalty.
- Water (Rivers): If the Water attribute <30, the player must pass an Agility check to swim across or be swept away (suffer 5 HP damage).
- Fire (Lava): If Fire attributes <40, players suffer 10 HP damage per turn unless they pass a Constitution check.

Special Procedures

Fate Dice Roll

At the start of every round, players roll a D100 (percentile dice) or 1d20 multiplied by 5, known as the "Fate Dice," to determine whether they trigger a lucky or unlucky event. (Example of Fate Cards see Component)

Fate Dice Mechanics:

1. Roll a D100 die or D20 times 5.
2. Compare the result with the player's Luck value:
    - If the result is ≤ Luck, the player triggers a lucky event and draws a card from the Lucky Deck, receiving a positive effect.
    - If the result is > Luck, the player triggers an unlucky event and draws a card from the Unlucky Deck, receiving a negative effect.

Special Results on the Fate Dice:

- Critical Success (Dice result of 1-3):
    - The player receives divine favor, doubling their AP for the round and automatically drawing a Lucky Card.
- Critical Failure (Dice result of 98-100):
    - The player receives divine disfavor, halving their AP for the round and automatically drawing an Unlucky Card. Additional negative effects may apply.

Endgame Procedures

The game ends when one of the following victory conditions is met:

Combat Victory: A player eliminates all opponents through combat.

Systems

1. Movement System

Purpose

The movement system plays a central role in exploration and navigation through the various elemental terrains in the game. Each terrain is tied to one of the Five Elements (Metal, Wood, Water, Fire, Earth), and a player's elemental attributes influence how easily they can traverse these terrains. Movement costs Action Points (AP), and players must manage their AP efficiently while moving across different types of terrain.

Rules

- Players must spend AP to move between tiles on the board.
- Depending on the terrain, movement may also require dice rolls to check for success.
- Players with higher elemental attributes (above 60 or 80) corresponding to the terrain may move more freely, reducing or avoiding penalties, while players with lower attributes must roll to determine movement success.

Movement Table by Terrain Type

Terrain	Elemental Attribute Level	AP Cost	Additional Rules

Plains	No elemental influence	1 AP	No special movement requirements. Players can move freely on plains without elemental checks.
Forest (Wood)	> 60 (Wood Attribute)	1 AP	Free movement through forests.
	30-60	2 AP	Players must roll a D100. If the result ≤ Agility, the player moves; otherwise, they remain in place.
	< 30	3 AP	Players roll a D20 to determine the attitude of the Wood Spirit. Success allows movement; failure stops progress. Critical failure results in a -5 Willpower penalty.
Mountain (Earth)	> 60 (Earth Attribute)	2 AP	Free movement and climbing of mountains.
	30-60	3 AP	Players must roll a D100. If the result ≤ Agility, the player moves; otherwise, they remain in place.
	< 30	4 AP	Players roll a D20 to determine the attitude of the Earth Spirit. Critical

			success grants double AP; failure results in -2 HP damage.
Water Bodies (Water)	> 60 (Water Attribute)	2 AP	Free movement through water bodies.
	30-60	3 AP	Players must roll a D100. If the result ≤ Agility, they can cross the water; otherwise, they remain in place.
	< 30	4 AP	Players roll a D20 to determine the attitude of the Water Spirit. Success restores 2 HP; failure results in 3 HP of drowning damage.
Lava Zones (Fire)	> 60 (Fire Attribute)	2 AP	Free movement through lava terrain, no damage taken.
	30-60	3 AP	Players must roll a D100 to avoid taking 3 fire damage.
	< 30	4 AP	Players roll a D20 to determine the attitude of the Fire Spirit. Critical success grants a +5 attack bonus; failure deals 5 fire damage.

Metallic Mines (Metal)	> 60 (Metal Attribute)	1 AP	Players can mine for rare minerals freely.
	30-60	2 AP	Players must roll a D100 to mine successfully; failure increases the next action cost by +1 AP.
	< 30	3 AP	Players roll a D20 to determine the attitude of the Metal Spirit. Critical success grants rare minerals; failure results in a cave-in, causing 4 damage and halting actions.

Outcome

- Success in movement actions allows players to continue exploring, gather resources, or escape from enemies.
- Failure in movement actions results in penalties such as HP loss, AP increase, or inability to move for the turn.

Action Procedure

- AP Cost: Players spend AP to move across different terrains.
- Attribute Check: Based on the terrain and the player's elemental attribute, a dice check may be required.
    - High Attribute (above 60): Players move freely or at reduced AP costs.
    - Low Attribute (below 30): Players must pass an attribute check using a D20 roll to succeed in moving, or face penalties (e.g., halted movement or damage).

Additional Game Elements

- Terrain-based movement impacts AP consumption and success rates, reinforcing the need to balance elemental attributes and careful path selection. Each terrain offers unique rewards and challenges that players must navigate based on their elemental attributes.

2. Combat System

Purpose

The combat system revolves around strategic elemental choices and player actions. Players can use non-elemental attacks (melee or ranged) or elemental-infused attacks, both of which depend on AP and dice rolls. The elemental interaction rules allow for both synergy (boosting damage) and countering (reducing damage).

Rules

- Players can perform basic melee or ranged attacks or infuse attacks with elemental power by spending extra AP.
- Attacks are resolved by rolling D20 x 5 for success, based on the player's Strength (for melee) or Agility (for ranged).
- Elemental attacks can gain +2 bonus damage if synergized, or be reduced by 2 damage if countered by the defender's elemental attribute.

Action Procedure

1. Choose Attack Type:
    - Basic Attack: Spend 2 AP for a melee (Strength) or ranged (Agility) attack.
    - Elemental Attack: Spend 5 AP for an elemental-infused attack.
2. Roll Dice:

    - Roll D20 x 5 for Strength (melee) or Agility (ranged) to check for attack success.
    - For elemental attacks, roll D20 x 5 for the elemental attribute.
3. Apply Damage:
    - Base damage is calculated as (Strength ÷ 10) for melee or (Agility ÷ 10) for ranged.
    - Elemental damage is added as (Elemental Attribute ÷ 10).
4. Elemental Interaction:
    - Synergy: Attacker gains +2 damage if their element synergizes with the attack (e.g., Metal enhances Water).
    - Countering: Defender reduces damage by 2 points if their element counters the attacker's (e.g., Fire counters Water).

Game Elements

- AP: Players must manage their AP, balancing between basic attacks, elemental attacks, and movement.
- Elemental Synergy/Countering: Encourages players to consider elemental attributes when attacking or defending, adding strategic depth to combat.

3. Elemental Interaction System

Purpose

The Elemental Interaction System defines how players' elemental attributes (Metal, Wood, Water, Fire, Earth) affect both combat and movement. This system introduces elemental synergy (enhancing attacks) and countering (reducing incoming damage) based on attribute values.

Rules

- Players can use their elemental attributes for both combat and movement.
- Synergy boosts an attack's effectiveness by +2 damage if the attacker's element enhances the attack.

- Countering reduces the attack's effectiveness by -2 damage if the defender's element counters the attack.
- Players can also use elemental attributes to reduce the AP cost of movement or avoid penalties in terrain aligned with their element.

Game Elements

- Elemental Synergy:
  - Metal generates Water: +2 damage when Metal >80 and performing Water attacks.
  - Water generates Wood: +2 damage when Water >80 and performing Wood attacks.
  - Wood generates Fire: +2 damage when Wood >80 and performing Fire attacks.
  - Fire generates Earth: +2 damage when Fire >80 and performing Earth attacks.
  - Earth generates Metal: +2 damage when Earth >80 and performing Metal attacks.
- Elemental Countering:
  - Metal counters Wood: Metal >80 reduces incoming Wood attacks by 2 damage.
  - Wood counters Earth: Wood >80 reduces incoming Earth attacks by 2 damage.
  - Earth counters Water: Earth >80 reduces incoming Water attacks by 2 damage.
  - Water counters Fire: Water >80 reduces incoming Fire attacks by 2 damage.
  - Fire counters Metal: Fire >80 reduces incoming Metal attacks by 2 damage.
